My app will need to be able to change the image that it displays in the login screen. I've used the Firebase Login in a previous Flutter app and it worked perfectly and was very simple. I'm just struggling to get my head around the Android authentication process and how it works. The first problem is that the firebase plugin (at the time of writing) only works for iOS and not Android. I've found that there is a plugin for Android called Firebase (as seen in but i have no idea if it will work. This seems to be a popular plugin as you can see it's the 2nd highest upvoted plugin. The second problem is that when i create a new Firebase (Using the FlutterFireAuthPlugin) method that is supposed to change the image, it gives an error that says: App crashed. Unable to execute the method. I'm guessing it means that the plugin is unable to find the method that needs to be called. If anyone has any suggestions as to what i'm doing wrong, or if you have a more complete tutorial that works for Android that would be really helpful. Here's the code that i'm using to try and get the image to change: var user = FirebaseAuth.instance.currentUser; if (user!= null) { // The user is signed in. setState() { _logoImage = Container(height: 150.0, 5b5f913d15
