Q: Delete all children in Firebase Firestore after deleting a document I am struggling with deleting all children of a document after deletion. I have a Firebase Firestore database structure like this: users/id/groups/id/subGroups/id/documents When I delete a document from the sub-group 'documents' I want to delete all documents in the sub-group 'documents' and I want to delete all children of the document. In the database structure above I want to delete the document with uid: 5, group uid: 2 and sub-group uid: 1 and the documents inside the sub-group documents and I want to delete all children of document with uid: 3. I have the following code which deletes one document fun deleteById(id: String) { val reference = database.collection("users") val firebaseDocument = reference.document(id) val task = firebaseDocument.delete() task.addOnSuccessListener { Log.d(TAG, "Deleted document \${id}") } } } But how can I delete all children in one shot? A: To delete all documents in a collection, you can use removeAllDocuments(): database.collection("users") .whereEqualTo("group_id", id) .whereEqualTo("sub_group_id", id) .removeAllDocuments() .addOnSuccessListener { Log.d(TAG, "Deleted collection \${id}") } t m b e - 1 0 - (0 +

What's New in the AutoCAD?

Quick and easy-to-use markup tools let you mark up layers and selected objects, select and type over selected regions, or apply text formatting directly in your drawings. (video: 9:30 min.) Speech Recognition in Plot and Presentation: Improve the accuracy of your plots by using the built-in speech recognition, which supports English, German, French, Spanish, and Italian. (video: 2:27 min.) Collaboration and Presentation Enhancements: Now you can share your presentation directly on Google Slides with your colleagues and clients. (video: 1:55 min.) New My Cloud deployment option lets you store drawings and their corresponding drawings on your cloud account, so they're always with you. You can access them from any device. Sketch to Mesh: Now you can draw 3D sketches easily with this new feature. Sketch to Mesh works in a similar way as Wireframe to Model to Mesh, with a few important differences: Select the sketch to create a model of your drawing. You can create as many models as you like with the same sketch. Draw freely, using a 3D wireframe to model your drawing. When you save the sketch, you also save the wireframe in the same.aab file, which means the model is always available, so you can go back to it whenever you need it. When you share your model with others, they can view the wireframe, but no one can edit or delete it. (video: 2:42 min.) Drawing and Modeling Enhancements: Draw Freely, with Your Pen, Without Edits: Now you can draw with your pen freely, even though you've never used it before. With the new Pen Selection, you can draw with any tool without first selecting it. This new feature lets you draw freely, but it also lets you select any tool you want by tapping on it. You can use this selection to fill, subtract, copy, or move. When you save your model, you can save the selected data in a.aab file. This makes it easy for you to transfer the selection and the drawing data to another location. You can now create complex drawings with vector data: Use layers, regions, and complex shapes to make any type of complex drawing you can imagine. When you save your model,
