AVG Norton McAfee ComProtection will protect your computer from any virus and trojan horse it has not already discovered. All antivirus programs on your computer, including ComProtection, use a database of known viruses and trojans that is constantly updated to keep your computer protected from any new viruses that could harm your computer. Your password is what protects your privacy and ensures that only people you approve can access the contents of your computer. ComProtection uses a dual authentication system. First, it will check to see if your password matches the one that was provided on your registration form. If it matches, it will provide you with a message saying "ComProtection This product is a tool that lets you connect to various web sites and search them in order to compare prices and find products that are cheaper than others. You need only to insert a web site address or select one from the available list, then search in the database for a similar website. Product description: Sesoftware Homepage is a small application which allows you to enter and store URLs of internet sites in a single window. In this way you will have the possibility to find your favorite sites, save them in a list or bookmark them without opening another window.
