As I think you misunderstood how the Mellows are supposed to work. The Mellows will even continue to work and tend to the garden while you are not playing the game! The Mellows only return to the garden if they find a new seed/fruit/honeycomb. So the only way you would be able to interact with them while you're not playing the game is if you plant a seed or fruit in the garden, then wait for them to return, and pluck that fruit/seed/honeycomb. As a human named "Gerald Fortran" from the "Twenty-first Century", it is your job to save the world, and the only way to do that is to collect enough "Growth Points" to grow a giant robot that can fight an army of enemy robots. You must grow the robot's base by collecting enough of the blue pickups on the ground to fill "growth bars" at the top of the screen. This will allow you to unlock the Robot Mode for your giant robot that you control. Unfortunately, there are so many enemies, and you will be so tiny, that your rescue mission may not be as easy as you think it will be. However, you can save the world with your array of weapons and the help of your companions. So, unless you're one of those people who is like "Well, I just don't like shooter games", I'd definitely recommend that you give this game a shot and give it a try. That's because it does have a unique control scheme that is built around the premise that you're controlling the size of your avatar, but only as far as it is tall, which also puts you in a unique control scheme. With that, though, I would say that it's definitely worth it to give this game a shot if you want to give it a try. Welcome to the world of "Funny Fingers".
