Treatment of endometriosis. Endometriosis is a very common disorder and usually affects the pelvic region in young women of reproductive age. Pain and infertility are major problems that accompany endometriosis. Recently, laparoscopic surgery was developed and has since become the standard treatment for endometriosis. The most common treatments for endometriosis currently are operation and medical treatment, and hormonal therapy is also gaining popularity. The treatment for endometriosis has been greatly improved

over the past two decades, and different treatment protocols have been evaluated.

On the other hand, we cannot treat endometriosis because of its high occurrence; therefore, the initial treatment of pain should be considered before attempting to treat endometriosis in the future.
