A: I had the same problem, and finally found a way how to fix it. Use the Windows Update to check for updates. It found an update for Windows 32-bit (KB 2516823). I guess its a bug in the new version of the driver of you CPU. Download the old driver for your CPU (32-bit) from this website: Unzip the old driver and replace the new

driver. After you're done, restart the computer. After you click on the Get Updates icon, you'll find an update for the new driver. Hope it works! Pneumatic power machines are used for a wide variety of applications where the use of hydraulic power machines is not possible, or inconvenient, or for any other reason non-advisable. Pneumatic machines require the user to control a pneumatically-operated valve, which delivers air to the power stroke of the pneumatic machine
