Colorectal cancer is one of the most frequent malignancies in Europe, the United States and Japan. The average age at diagnosis is about 70 years and equal numbers of men and women are affected. The five-year survival rate is 50%. The mortality is only 10% of all patients. Risk factors include age, inflammatory bowel disease, previous bowel adenomas, smoking, and certain dietary habits. In addition, gene changes are seen in familial adenomatous polyposis and hereditary non-polyposis colorectal cancer. Most colon cancers arise from adenomatous polyps. Low- and high-risk adenomas are distinguished by the presence of cytological dysplasia. The risk of malignancy in adenomas is correlated to the degree of cytological dysplasia, with 20% of adenomas without dysplasia and 50% of adenomas with carcinoma in situ undergoing malignant transformation. Surveillance colonoscopy is indicated in patients with a personal or familial risk for colorectal cancer. Prophylactic colectomy should be done in patients with familial polyposis coli or in those with colorectal cancer and a positive family history. Q: C# Application understanding the lifecycle I have been trying to understand about the lifecycle of C# application and here are what I am trying to understand The Main() or the Startup() method (at that point, it hasn't started yet) are where the application runs if I close the application, then the application stops right after Main() or Startup() returns or does it keep running for a while until the program dies? A: No, the application stops after that (and often it is easy to see why, because you did not do anything with a sensible delay in between your lines of code). Q: Why did Google change the name of its Chrome OS to "Chromium OS"? After a week or so of use, it looks as if Google is phasing out the name Chrome OS with a new one: "Chromium OS". It is not entirely clear what the new name is meant to imply and to what extent this will have a real impact on the end user. Is it solely a branding exercise? A: According to a Google blog post: "Chromium OS" is a new name that will be used for Google's platform for Chrome OS products going forward. This name will be applied to all new products, including laptops, and to existing products like the Cr-48. Seems like a replacement for Chrome OS, and the branding will be rolled out to all existing products for the time being. A: From the Google support page: Where will the Chrome OS brand be applied? Currently, the Chrome OS brand will be applied only to Chrome OS laptops. However, starting later this year, we will be expanding the use of the Chrome OS brand to include Chromebooks, Chromeboxes, and other Chrome OS products where Chrome OS is a sensible branding option. The Chrome OS brand will also be applied to new products that are introduced in the future. Does changing the name of Chrome OS from "Chrome" to "Chromium OS" have any impact on existing customers? There's no impact to customers – it's simply a new name for the same great platform. However, to avoid confusion in the future, you should avoid the use of the �
