Tarnished is an episodic fantasy action RPG developed by Cygames Inc., featuring turn-based battles and a soulful storyline. You are one of the gods who dwell in the Lands Between (Illusionary World) and have taken on human form to protect the weak Elden. A human with a divine spirit, the player has the chance to become a master of fantasy by controlling a hero with the power of the Elden Ring Product Key. As the battle between good and evil unfolds, you will uncover the key to the future of the illusionary world in the light of a cut-throat fate. The names of the characters and monsters appearing in this visual novel are fictitious. Their original names are used as a reference. © 2016-2020 Cygames Inc. All Rights Reserved.

Novel tribological properties of TiN nanostructured ceramic coatings deposited at low temperature. Scaling down the size of devices and increasing the operating speed of electronical systems require extensive research to improve the performance of surfaces. Metal/metalized interlayer regions between the metal and the silicon-based transistor substrate play important roles in the high-voltage reliability of metal/silicon-based Schottky diode field effect transistors (S-FETs). Metal-graphene (G)-FETs have a high probability of failure in high-power and high-speed circuit applications. Although TiN coatings have been widely used for metal/silicon interlayer and metal/graphene interlayer, their nanostructure and surface hardness have not been thoroughly investigated. The present study investigated the nanostructure and surface hardness of TiN films with film thicknesses of 10 and 30 nm fabricated by reactive sputtering at room and low temperatures. The test samples were characterized by high-resolution X-ray photoelectron spectroscopy and optical transmission microscopy. A higher hardness and micro-hardness were obtained at a lower temperature; thus, it is concluded that TiN films prepared at room temperature are more suitable for S-FETs or metal/graphene-FETs, and TiN films prepared at a lower temperature are preferred for contact between the metal and metalized interlayer in metal/metalized interlayer devices.

What's new in Elden Ring:

October 02, 2018 - 3:00pm: Big Game Hunters, Past & Future Evolution
2018-10-02T16:19:00Z

Every author dreams of being the next Ken Thiele, the creator of many fantasy legends, most notably Call of Cthulhu, the Dungeons and Dragons, Arcanum, Tomb of Annihilation, and the Planescape series. But every writer knows there's a long road between the first step and the final, Day 1 version published on a major video game platform.

Big Game Hunters will become the latest Call of Cthulhu tabletop RPG by Matt Tables and Paul Reekie, following up on the recent 9th edition of the game released by Waterlooplevels.

The support of Big Game Hunters reinforces the concept of development and evolution as a thematic core value of the series.

In an exclusive preview from the first issue, I talk with the creators about the past and the future of the Call of Cthulhu RPG that they're developing with Big Game Hunters.
