winEx compatible with all formats I use winEx to merge some DLLs into my windows application. But because of differentdll format, my application would fail. As I know, winEx is compatible with all DLL formats. But winEx can't access to all.exe file. The only file winEx can access is.exe with "model". May I know how winEx can deal with different.dll formats? I am very curious. Re: winEx compatible with all formats Hi man! The goal of WinEx is to be a program that will search and insert a dll in the end of the exe file, but unfortunately I do not know winEx I would like to help you solve the problem, if you want to try to resolve the problem yourself! In short, I think that the program does not try to find and insert a dll file and only finds the exe, the program inserts the.dll file and then continues to look for the correct path to the.dll file in the system. Re: winEx compatible with all formats I have installed the latest winEx beta, but I cannot access.dll's from other format. For example, I want to insert sqrt.dll. I can find it by clicking on the winEx icon in the system tray. But when I click on the "Insert" button I cannot find it in the list, but I am able to find it if I click on the "browse" button. May I know how I can solve this problem? I just want to insert.dll files from any format. I do not want to put a need to install other plug-ins. This subproject is one of many research subprojects utilizing the resources provided by a Center grant funded by NIH/NCRR. Primary support for the subproject and the subproject's principal investigator may have been provided by other sources, including other NIH sources. The Total Cost listed for the subproject likely represents the estimated amount of Center infrastructure utilized by the subproject, not direct funding provided by the NCRR grant to the subproject or subproject staff. Partial support is requested for a full-time position for a postdoctoral fellow in structural biology. The overall objectives of this project are to develop new methods for structural analysis of biological macromolecules. The primary focus is on the use of novel methods to generate information about secondary structure, tertiary structure and dynamics of proteins, nucleic acids and other biopolymers. A group of algorithmic and statistical methods is being developed to address a range of challenging problems in structural analysis. The group includes novel methods in pairwise alignment, automated graph tracing, automatic secondary structure prediction, statistical analysis of protein structures, 3D-Jury, gel-filtration chromatography, applied crystallography, and electron microscopy. These methods are being used to assist in the determination of protein structure, folding, stability, and function.
