

Facebook Hack Password.txt (0.03 Kb) ((HOT))

we asked facebook why the hack was still ongoing and if it was going to be put to an end soon. in a blog post on september 9, facebook stated that they were aware of the incident and were taking the necessary steps to stop it. however, the company did not reveal any further details about the incident or the action taken against the hackers who stole the data. facebook has no further comments on the incident. however, the hackers have so far kept mum about the incident. we also reached out to the twitter user who posted hack passwords.txt on his/her account. the twitter user replied to our inquiry saying that they had removed hack passwords.txt from their website. however, the hacker did not reply to our queries. we have contacted them as well to find out what they knew about the incident. as of yet, hack passwords.txt is still available on the hacker's website. however, as mentioned earlier, the hacker has removed it. hack passwords.txt is a simple text file containing a list of email addresses, usernames, and passwords, which hackers can access and use to break into victims' accounts.txt was uploaded on the hacker's private website on september 5, 2013. however, it was removed after that. we don't know if it has been removed for good or if it will be uploaded again by the hacker. however, if you were to access the website at the moment, you will get a 404 error page that reads, "the requested url /hackpasswords.txt was not found on this server." go in. step one. as its still the weekend, the web is usually the best place to start this kind of work, so we search for info on the target. in this case, the first place we check is a facebook page. we do not start by mining the whole page, since even with the best search engine, you will probably miss some of the pages that are related to your target. so, we use duckduckgo and type in the name of the target (in this case, hermoso), and get a list of related pages. clicking on the name of one of these sites brings up an informational page from facebook, which can provide us with a lot of useful information. using the information on the page, you can find various hints on the target's identity. for example, if a target has a page that contains a lot of images of him, you can assume that he is a photographer.

Facebook Hack Password.txt (0.03 Kb)

this is where we saw a link to a site that claimed to be the official facebook account recovery tool. however, it was not a legitimate site. while we waited to see if the page loaded, we monitored a few security-related search results. one search result resulted in a search page that requested login information. as soon as we filled in the email address that was asked for, we immediately received an email containing the word file that contained the username and passwords for the victim's facebook account. this file was then followed by a link to the fraudulent site in an email. for example, we have seen a hackercases facebook post that claimed to be from a hacker with the handle "alien_4_free". however, when we looked into the information provided, it seemed suspect. the hacker claimed to have hacked into a user's facebook friends' list and that the hacker then used that list to obtain the account's username and passwords. the credentials of five million users have been stolen from the file as its key components were included in the leaked data. hackers took advantage of the fact that these credentials are made public whenever a facebook user asks for a password reset. each set of credentials typically includes a user id, an email address, and a password. however, the most commonly-stolen information includes the username and the email address. thus, hackers can use these credentials to break into the victims' accounts. hack password.txt is a file named after a popular password reset message being sent by the social network. it is a simple text file containing a list of email addresses, usernames, and passwords, which hackers can access and use to break into victims' accounts. the file was found online and posted by a twitter user in august 2013. the hacker who posted it claims that the file contains the credentials of five million facebook users. they also claim that the file was put online for people to download. the twitter user who posted the file gave the download link to hack passwords.txt on a file sharing website. hack passwords.txt was uploaded on the hacker's private website on september 5, 2013. however, it was removed after that. 5ec8ef588b
