## JetBrains PhpStorm 2017.2.2 Build 172.4155.25 Incl Licence Download

It is a beta edition of the upcoming PhpStorm 2018 (which will be released in 2018) and features an updated and rewritten set of applications, improved speed and usability, maintenance of older platforms, more detailed debugging support, and countless other upgrades and improvements. This is what I expect from a new major version of PhpStorm. It is my best PhpStorm build so far, maybe the best ever. Check out the highlights of the new PhpStorm 2018 below. In this video, I will show you how to build a clean copy of a ready-to-use Spring Boot project from an existing GitHub repository. You can use the Spring Starter Application to learn these steps. This tutorial also looks at some new and unique features in PhpStorm 2018.1.0, including updating your tools, saving and loading profiles, working with repositories, running code analysis for whole or specific files, sending refactoring batches from the context menu, the refactorings context assist, improving quick fixes, code inspections and others. Also, I show you how to install, configure and run my new video recording to camera module. Things I like about PhpStorm Fast and robust support for CSS, HTML, JavaScript, and even Smarty Full support for TS, HTML, JavaScript, and CoffeeScript Smart navigation, with functions and variables jump-to-anything Run As.. with listeners, and Listeners tab Excellent syntax highlighting, with more than 400 languages Good performance Smoother projects with Git, including much better support for nested repositories Good customizability Great debugger Good auto-completion for methods, properties and classes Really cool refactorings Debugging tools for remote debugging Emphasizing working on the server side, auto-completing from SQL statements Support for Python and the BEAST protocol Built-in deployment tools Tabbed consoles PHPUnit and phpDox integration Include path complete Persistent external tools Very good DTS support Command line help Comes with the Python plug-in Configuration files in the IDE Great help system Errors are shown in the editor Good for VIM and Emacs users Good Javascript code-completion and refactoring support Building system is nice and flexible Run with Docker, Remote Run View, and a Docker Filesystem Enables SSH tunnels You can also generate Java, JSP and JEE web projects, using the Maven and Gradle plugins, and they will be run on the server Works great with JetBrains libraries JavaScript language support You can add custom actions, to open on file change, on line change, on import, on restart, and other events Customizable Keyboard Shortcuts Find in Files Runs on Mac, Linux and Windows Summary 5ec8ef588b
