## Dish Network Acquiring Signal 535 Stuck ((FULL))

dish receiver error ea32dish problem/solution: please check to make sure you are connected to the internet and that your connection to the internet is active.furthermore, please check your satellite power.if you continue to have problems, please contact technical support. sometimes it can be frustrating when the signal on your television set goes out, especially if it's right in the middle of a march madness tournament game. before you get too worked up and call your local dish network serviceman to come out and fix your tv there's a few easy steps you can take to make sure your satellite tv system is working properly. there's also an issue with dish network that i have been having with my dish hopper that seems to be affecting a lot of other people. when we first signed up with the dish network company years ago, it worked great, and we didn't have any problems. i was a little skeptical when she, our teenage daughter, called for the first time to set up our hopper, because she knew how i could be hard to get ahold of, so we weren't going to be happy with the service if she couldn't get ahold of me. she ordered a hopper with dvr and i had to help her set it up, for the first several months everything worked well and we were very happy with the service. there was only one problem - a big one, that made us very unhappy with the service, but in a way that we weren't really sure why it was happening. the remote didn't have an on button. we could watch live tv on the hopper, or on the dvr, but if we wanted to rewind, fast-forward, or pause a recorded show, we had to use the tv guide remote control. (but you could still get the on button if you were watching live tv.) our dish was directv, so we didn't have the option of using the dish tivo (which is like a tivo box with an antenna.) we were able to keep watching programs, or if we had to, we could manually fast-forward through the recorded shows on the dvr's recorded menus, and then watch something else while it recorded. when she got back home after we set up the hopper, she was so annoyed and frustrated with the lack of the on button. even though it was a big problem for her, we were happy with the hopper.

## Dish Network Acquiring Signal 535 Stuck

i have a dish network hopper dta-943 and through the use of the ever changing settings on the hopper and by checking the settings from my iphone it seems to me i have made the settings the way they should be for hopper. i cannot receive the wireless channels as the link shows they are active on the hopper. i have made the appropriate changes and have only been able to get dish to rework my antenna. the signal has not been acquired by the dish. this will show as a wtv in the main menu, once acquired the auto tuner will work, this is not a problem. it means that a new rf pattern was detected and is working. if you do not get a wtv then the menu is locked. if you do get a wtv then the system has in fact acquired a signal. the menu that came up is the current menu. the menu you have selected is locked and cannot be changed without the use of a pin code. i have a 748. i finally had one dta-943 shipped from comcast. i cannot get any channels. my signal bar says 99.4. i've also tried the antenna. everything says that it is a good connection. i have also tried to use the hopper to

---

fill in the channels that i cannot receive and still cannot get any channels. i tried putting dishtv on for 1 week and they still couldn't get the signal. i'm just really frustrated now. the dish is not acquiring the signal and the signal is coming from the location it should be. the dish is the correct size and specifications. i have also checked to make sure that i have the correct firmware. the hopper only has the option for channels with the lbe (local base extreme) and was not set to hd. it was set to the old hopper version 7.1. you cannot have both lbe and hd at the same time. i can get my channels back by going to the program guide and selecting the hd option on a channel that i can actually get but i don't want the hd option to make the channels that i can get disappear. 5ec8ef588b
