Aside from the new split-pane view — so familiar to those with Lightroom or Aperture — Photoshop Element 10 is very little changed from Element 9. This is as expected, as Elements has been on the market since its first release in 2006. With that said, and although there are no significant updates to the program, we were still a little disappointed with it, especially when compared to Lightroom 4. I remember when Lightroom arrived and rave reviews were read from the industry community. Sadly, it seems to have taken ten years for Adobe to deliver a significant upgrade. Clarification of release timeline aside, I still consider Lightroom 4 to have addressed many of the complaints that have been brewing since version 3.0, for example in the areas of performance, automation and speed. If you do not mind resizing and cropping photos into social media friendly sizes, Lightroom should now be a little more patient than it was in version 3.0. I have noticed many of my reviews appearing on Instagram lately, which is a good thing. Well, for me.
