Adobe also announced an “Adobe Creative Cloud All Access” membership that offers much improved performance and tools. A per-seat price of \$9.99 for over 700 features and a whole lot more besides, this replaces the previous “Creative Cloud” membership aimed at graphic designers and photographers. Adobe Lightroom was originally released in 2006 under the name Adobe Lightroom Lite. In 2009 this was reworked and released under the name Adobe Lightroom 3. Since its release, Adobe has been overhauling the software and adding quality control procedures, and in Lightroom 4, released in 2011, the most significant overhaul occurred. Its new name, Lightroom CC, represented everything that was new; a name change and a huge overhaul. After 3.5 years, the last major overhaul in the media management tool was in 2014 and was entitled Lightroom CC 2015. There was practically no disruption to the users, and many of them even installed Lightroom CC 2015.

In case you see the familiar U shapes in your applications, it means that there is version released to support the new native APIs in 3D graphics programming. The Photoshop Shared 3D format will now be retired by the company and replaced with a new version. Adobe had originally planned to release a native macOS version of Photoshop CC 2018 in the second quarter of 2019. But unfortunately, the company had to push the release temporarily to the third quarter. The version to be released in March is also an upgrade to the version that the company had released last year. Also, Adobe has partially broken down its “Supported Files” categories that list the file formats that Photoshop CC 2018 and earlier supported for native Mac. All of the formats have been dropped completely, and the only format now supported natively for macOS is JPEG2000, which was previously supported under Mac OS. The last official support for Mac OS in the previous versions of Photoshop comes to an end with Photoshop CC 2019. The company is planning to provide a native Mac version of Photoshop CC 2019 on March 2020. Otherwise, you need to use an iPad version of Photoshop CC 2019 and the Files CC app to open Photoshop file formats that were supported in the previous versions of Photoshop. The Adobe CC portal is still not available on the iPad version of Photoshop CC 2019. Now the company will release a new set of videos with the above explanation. Also the company has already discontinued the free tutorials. The company is planning to provide a subscription for the Photoshop Community.
