Adobe Photoshop is now a totally different beast than it once was. Lightroom can no longer easily stand beside Photoshop as a photo editing tool and this makes it less attractive for professional photographers and illustrators. Apple Lightroom won't get noticed if it is displayed in a museum, that's for sure. The downside is that it is now Mac-only, which is a bit of a tragedy. If Lightroom was free on Windows and Mac OS X, more developers would be interested in supporting it. So, Adobe is charging a very comfortable price for users of either operating system to get the software. However, it is important to keep in mind that branding is still a powerful tool for Adobe and the Lightroom brand currently seems to be a great fit for their software. **Adobe Photoshop:** Lightroom 5 is completely different from the previous versions. It's easier to use, it's smoother and it's faster. It's the Photoshop tool design in 2012. I am not a fan of starter kits. First of all, they are way too short. With so few tools, the users have to choose what they want to master, before moving on to the next one. This can be problematic for beginners. As mythologies put it, H3AD1ES2 can be learned in one sitting. If Lightroom is to stand a chance against Photoshop, it has to mix short lessons with longer ones. I suggest that Lightroom does not copy Photoshop in its entirety. Instead, it should add some new features and enrich those features with analogues of what Photoshop offers for example, cannot do.
